

SHORT-TERM EFFECTS OF ALCOHOL ON THE BODY

SCIENCE/ ENVIRONMENTAL STUDIES 11 - 16 WORKSHEET 3

When alcohol is swallowed, how does it affect the body in the short term? The effect depends on the person - their gender, size and weight, what they've been drinking and whether they've eaten anything first.

Because it depends on weight and size, the person's age is important too. The same amount of alcohol will have a much greater effect on the body of a child or young person than on an adult, because their bodies are still growing and developing.

ACTIVITY ONE

SHORT-TERM EFFECTS OF ALCOHOL ON THE BODY

SCIENCE/ ENVIRONMENTAL STUDIES 11 - 16 WORKSHEET 3

Draw a line to connect the parts of the body below with short term effects experienced after someone has drunk alcohol.

Brain

Kidneys

Liver

Heart

Lungs

Stomach

Slurred speech

Difficulty standing up or walking

Looking flushed

Feeling sick

Needing to urinate more (less anti-diuretic hormone secreted)

Loss of self-control

Slow reactions

Dehydration leading to a 'hangover'

Blurred vision

ACTIVITY TWO

1. After drinking a lot of alcohol in the evening, can someone avoid a hangover by drinking a glass of water before they go to bed? Give reasons for your answer.
2. Can someone get rid of the effects of alcohol quickly by drinking a cup of coffee? Give reasons for your answer.
3. How would having a meal before alcohol affect the concentration of alcohol in someone's blood? Give reasons for your answer.
4. Why is cirrhosis of the liver called a 'silent disease'?
